DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 2, 3, and 9 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-2 and 7 of U.S. Patent No.6774934 (herein, USPN-934). Although the conflicting claims are not identical, they are not patentably distinct from each other because both invention relates to maximizing the power measure of a combined audio signal and limiting the combined gain of the combined signal.

Regarding claims 2-4 and 9, USPN-934 discloses a signal source localization arrangement (claims 1 and 2) and communication arrangement (claim 7), including receivers, which indicates a plurality of audio sources generating input signals, impulse

response determining means, which indicates deriving processed audio signals, and further the impulse determining means provides for maximizing the power measure of a combined audio signal and limiting the combined gain of the combined signal, therein as claimed.

Response to Arguments

2. The applicant only provided remarks in respect to a cancelled claimed and commented on the provisional double patenting rejection in view of a copending application, 0919064. However, a new double patent rejection is being provided in view of patent no. 6774934.
